Furniture Manufacturing Headed to Knoxville

The Starke County Economic Development Foundation has announced that Selected Furniture will provide 25 new jobs when it moves into the former Rockwell Building in Knoxville. Charles Weaver, executive director of the foundation, says the firm will invest more than \$one million when it purchases, renovates and equips the 201,000-square-foot industrial facility that once produced windows and doors. The Federal Group was the most recent manufacturer in the facility.

Safety-Kleen Launching Blending Plant

Safety-Kleen, an Indiana-based oil re-refiner, recently launched an East Chicago blending plant. The \$15 million facility is expected to save more than \$5 million a year by allowing Safety-Kleen to blend its own oil products at the plant.

It includes the ability to blend passenger-car, and heavy duty diesel engine oils, says Dave Sprinkle, executive vice president of oil re-refining. The initial capacity of the plant will be 20 million gallons.

Scott Miller, director of oil re-refining, helped manage the project and will oversee the new site. Amex Nooter, LLC, was the general contractor overseeing a \$5 million portion of the project.

It will no longer be necessary to send truckloads of base oil to third-parties, which will reduce the loading dock workload and transportation costs. The decreased handling also minimizes contamination risks and improves quality control. The facility also will be automated and computer controlled.

Energy Drink Stimulates Wabash Growth

Living Essentials, the company responsible for 5-Hour Energy, is expanding in Wabash. The expansion will total one million square feet in two or three phases. Phase I will be 500,000 square feet and subsequent phases will total an additional 500,000 square feet.

The total new capital investment for Phase I will be at least \$18 million, according to President and CEO of the Economic Development Group of Wabash County Bill Konyha. Additional investment in subsequent phases will be a minimum of \$12 million, not including manufacturing equipment. It is estimated that 60 jobs will be created as a result of phase I. Konyha says it will contribute to a new payroll of more than \$1.6 million.
